

How to Install Gymnasium on Windows, macOS, and Linux

Linux

1. Install dependencies:

```
sudo apt update  
sudo apt install python3 python3-pip -y
```

2. Install Gymnasium:

```
pip3 install gymnasium
```

3. Verify installation:

```
python3 -c "import gymnasium as gym; print(gym.__version__)"
```

macOS

1. Check Python installation:

```
python3 --version  
If missing, install via Homebrew:  
brew install python
```

2. Install Gymnasium:

```
pip3 install gymnasium
```

3. Test installation:

```
python3 -c "import gymnasium as gym; gym.make('CartPole-v1')"
```

Windows (not official support, can try or use Linux Virtual Machine/WSL)

1. Install Python 3.8 – 3.12 from <https://www.python.org/downloads> and make sure to check “Add Python to PATH.”

2. Open Command Prompt and run:

```
pip install gymnasium
```

3. Test installation:

```
python  
>>> import gymnasium as gym  
>>> env = gym.make("CartPole-v1")  
>>> env.reset()
```

Note: Some optional environments like Atari or MuJoCo may require extra system libraries.
